*Iteration 2 - Feature Set*

*April 4, 2014*

Adrian Hernandez

Patrick Leopard II

Luke Oglesbee

Alec Siems

Ryan Sligh

Joe St. Angelo

## Customer (Mobile iOS)

**Login** - Enter username and password to proceed.

**Create account** - Make a new account.

**Location checking** - Only allow someone to order from the mobile app if they are on campus.

**Order ready notification** - User receives a push notification when the order is bumped from the queue.

**Grab 'n Go nutritional facts** - Clicking a Grab 'n Go item displays nutritional information about the item.

## Customer (Web)

**Login** - Enter username and password to proceed.

**Create account** - Make a new account.

**Edit account** - Change account information.

**Order** - Place an order and add it to the order queue.

**Order ready notification** - Let the customer know when the order is bumped.

## Kiosk

The kiosk exists for walk up customers, and is set up with a password set by the administration. The ordering process should work very closely to the way a customer orders remotely on the web app.

**Login** - Navigate to the kiosk link (unlisted on the website) and log in with the password set by an administrator to open the kiosk for ordering.

**Order** - Same as the customer

**Logout** - Enter the password to close the kiosk for ordering.

## Chef

**Login** - Enter the username and password

**Create account** - Make a new account. Must have the verification key set by the administrator

**Edit account** - Change account information

**Change availability** - Mark menu items as unavailable so that customers cannot order them.

**Order overview** - In the sidebar of the queue window see how many base (i.e. burger, chicken, veggie) types are current in the order queue.

## Administration

**Login** - Administrative login credentials will be given.

**Set kiosk password** - Change the password for logging in and out of the kiosk.

**Set chef verification code** - Chef's need a verification code from the administrator in order to create an account. The administrator can change that code.

**Change availability** - Mark menu items as unavailable so that customers cannot order them.

**Change menu** - Add and remove items from the menu.

**User generated query** - Retrieve order data using given metrics and export to a .csv.
